
LOOKING FOR A FREE LUNCH? CONSIDER PUTTING CARBON IN YOUR PORTFOLIO.

Nitesh Shah – Head of Commodities and Macroeconomic Research, WisdomTree Europe
17 Jul 2023

The Nobel Prize laureate, economist Harry Markowitz, is reported to have said, “diversification is the only free lunch” in investing. His seminal work in portfolio optimisation in 1952¹ highlighted that assets with low correlations can reduce portfolio volatility. In other words, for a given level of risk, adding uncorrelated assets to a portfolio can potentially increase expected returns.

Finding low correlation assets can be a challenge. Bonds and equities traditionally have low correlations, making them the starting building blocks for portfolio construction. Commodities also have a low correlation with bonds, making them another great candidate to add to a portfolio.

Carbon markets are also a low-correlation asset (that is, they have low correlations to equities, bonds and commodities) that can help in the optimisation of portfolios.

What are carbon markets?²

Regulated or compulsory carbon markets are mechanisms that governments have implemented to provide a market-based solution to their decarbonisation efforts. In these mechanisms (so-called Emission Trading Systems or Cap and Trade systems) governments set maximum greenhouse gas emissions caps and issue allowances to firms operating in the various industries covered by their schemes. At the end of a compliance year, the firms must surrender enough allowances to cover their emissions produced during the year. These allowances are tradable in the secondary market (before surrendering them to the government), allowing firms that find decarbonisation expensive and difficult to buy more allowances, and firms who find it easier to decarbonise to monetise their allowances. By design, as the caps fall each year, the government-set emissions will fall. The allocation of that cut in emissions is efficient, as it is borne by the firms facing the lowest cost of abating.

Alongside a secondary market in these allowances, there are futures markets on allowances. The futures markets can be used by commercial hedgers and investors/speculators alike. Carbon allowance futures are an emerging asset class.

The two largest carbon markets in the world are the European Union Allowances and the California Cap and Trade market. Together they accounted for over 90% of the value in global carbon markets in 2022³.

Low correlations

Looking at these two carbon markets, we can see a very low correlation between them and traditional asset markets: equities, bonds and commodities (Figure 1). EU Allowances (EUAs) have a particularly low correlation with other assets. California Carbon Allowances (CCAs) have a slightly higher correlation with US and global stocks, but still considerably lower than the correlation between broad commodities and these two equity markets.

Surprisingly, the correlation between EUAs and CCAs is very low at 0.23. That compares to a correlation of 0.74 between S&P 500 (a US equity benchmark) and MSCI Europe (a European Benchmark). Such low correlations indicate that both carbon markets could be considered simultaneously as options to make a portfolio more efficient.

Figure 1: Correlation matrix

| | CCA | EUA | S&P | MSCI ACWI | MSCI Europe | Bonds | Broad Commodities |
|-------------------|------|------|------|-----------|-------------|-------|-------------------|
| CCA | 1.00 | | | | | | |
| EUA | 0.23 | 1.00 | | | | | |
| S&P | 0.39 | 0.25 | 1.00 | | | | |
| MSCI ACWI | 0.39 | 0.26 | 0.96 | 1.00 | | | |
| MSCI Europe | 0.22 | 0.23 | 0.74 | 0.83 | 1.00 | | |
| Bonds | 0.22 | 0.07 | 0.24 | 0.32 | 0.06 | 1.00 | |
| Broad Commodities | 0.17 | 0.12 | 0.39 | 0.44 | 0.31 | 0.14 | 1.00 |

CCA = Solactive California Carbon Rolling Futures TR Index; EUA = Solactive Carbon Emission Allowances Rolling Futures TR Index; S&P = S&P 500 Total Return Index; MSCI ACWI = MSCI All Country World Index (includes developed and developing countries); Commodity = Bloomberg Commodity Total Return index; MSCI Europe = MSCI Europe Total Return; Global Aggregate Bond = Bloomberg Global Aggregate Index TR Index

Pushing out the frontier

Markowitz introduced the concept of an efficient frontier. Increasing risk (measured by standard deviation of returns) is usually associated with higher expected returns. Portfolio allocations that generate higher risk without higher returns are inefficient. In Figure 2, each dot represents a portfolio combination and plots the risk (in standard deviations) and expected annualised returns. The edge of the scatter plot of risk and return represents the 'efficient frontier'. The dark blue dots are a portfolio of equities, bonds and commodities with varying degrees of weights (and commodities are capped at 30% of the portfolio).

If we add EUAs to that portfolio (with a max weight of 5%), that shifts the entire scatter plot upwards and to the left, with the edge being markedly higher. That is, for each level of risk, there is a higher return profile when including EUAs. For example, for a portfolio volatility of 10%, you could increase your expected returns to 4.97% from 4.09% by adding EUAs (Figure 3).

Adding CCAs to that portfolio (with a max weight of 5%) also shifts the plot upwards, but by a marginal incremental amount. Because of CCAs' low correlation with EUAs, there is still some benefit to adding it to a portfolio in addition to EUAs. For example, for a portfolio volatility of 10%, you could increase your expected returns to 5.02% (from 4.97%) by adding CCAs to a portfolio of equities, bonds and EUAs.

Historical performance is not an indication of future performance and any investments may go down in value.

Conclusions

Diversifying with low correlation assets provides the only 'free-lunch' in the world of investing. Carbon markets have a very low level of correlation with traditional assets and, therefore, make great candidates for diversification. The various carbon markets around the world also have a low level of correlation between themselves meaning several carbon markets could be considered for inclusion.
